LASIK Surgery Post-Operative Instructions

You will be using two drops after your LASIK surgery
Vigamox Drops 1 drop four times daily for 1 week
Prednisolone 1% 1 drop both eyes four times for 2 weeks

Answers to frequently asked questions:

- ❖ We suggest using the drops according to meal times: Breakfast, lunch, dinner, and right before bed.
- ❖ It is okay to use tears after the procedure but definitely not necessary. Again, allow for 30 seconds between drops so medication is not washed out.
- ❖ Eye makeup (eye shadow, mascara, eye liner) should not be used until three days after your procedure.
- ❖ The clear shield provided to you after surgery should be worn while sleeping or napping for one week.
- ❖ No swimming for one week after surgery, also avoid getting water in the eye while showering or washing your face for one week.
- ❖ Eye shields or protection should be worn when playing contact or racquet sports or other activities in which the possibility of a traumatizing object contacting the eye may be high.
- ❖ No heavy lifting (40+lbs) for one week after surgery.

After your corrective surgery you will be sensitive to light and have the feeling that something is in your eye for 1 to 2 days. The sunglasses provided may make you more comfortable during this time. Some redness and irritation are common after the procedure, and will resolve within a few days depending on your body's normal healing time.

If you experience any of the following please call our office immediately: Severe pain, severe sensitivity to light, increased redness, or severe tearing.

****Call our office with any concerns****

We are so happy you chose us for your surgical eye care!
